

CINEMASSIVE

CineMassive Video Wall Server

The CMD Video Wall Controller is the ultimate video wall server for command and control, digital signage, and corporate applications. Each controller is custom tailored to your needs to ensure the optimal balance of price and performance. Capable of supporting up to 64 displays and between 1 and 128 video and pc inputs, the CMD Video Wall Controller is a flexible and powerful solution. Best of all, the CineMassive Video Wall Software package included with every server allows you to control this powerful tool from a single user interface, just like a standard Windows PC. The CineMassive CMD Video Wall Controller is ideal for both public venues and operations centers that need a flexible, easy to use video wall solution with 24/7 reliability.

Scalable

Support 2 to 64 display and beyond. We provide you with a stable, future-proof platform.

Programmable Layouts

Easily create and save the layout of any set of open applications.

Multi-Input

Support 1 to 128 inputs. Scale video windows to any size and position. You can even span your inputs across the entire Video Wall.

Multi-User Control

Connect to, view and even control the CineMassive Display Wall over either a remote or local network connection.

Video Wall Software

Every CineMassive Video Wall Server includes our comprehensive Video Wall Server Software Suite which provides you with an intuitive yet powerful interface for managing the content on your Video Wall.

24/7 Reliability

Our Video Wall Controllers are built with the same technology used to build ultra-high performance servers and workstations.

Custom Solutions

All CineMassive Video Wall Servers are custom configured and optimized to address the needs of your project for optimal performance and budget efficiency.
