

# CINEMASSIVE

## Video Wall Software

The CineMassive CMD Wall Control software allows you to wield the full power of your CMD video wall from a single application. The software is designed to be easy to use, so anyone who can use Windows can manage a CMD Video Wall. With the CMD Wall Control software you can:

### **Drag & Drop**

Simply select inputs and then drag them onto the video wall

### **Position & Resize**

Easily control the position, properties, and size of each input window as well as open applications

### **Select & Switch**

Built in matrix switch feature allows you to easily switch between input sources

### **Local & Remote Control**

View and control your video wall from either a locally connected console or from a remote location

### **Layout Preview**

Create and preview layouts before going live on the wall

### **Save & Instantly Recall Layouts**

Create and save custom layouts so you can quickly and easily switch between configurations

### **Control from Multiple PC's**

Multiple PC's can run the CMD Wall Control application and manage the wall, so you're not limited to having a single console

### **Application Shortcuts**

Add applications to your templates so that specific applications load in a specified size and position on your wall

### **Bezel Correction**

Bezel correction feature allows your control to account for the gaps between displays

### **Window ID's**

Create unique window ID's for each of your sources to help manage dozens of inputs simultaneously

### **Control from Multiple PC's**

Multiple PC's can run the CMD Wall Control application and manage the wall, so you're not limited to having a single console

### **Security**

Secure access feature means that only authorized users control the wall

### **Capture & Record**

If your controller is built with a capture card, you can use CMD Wall Control to record your inputs
